Ducted air conditioning is a whole home solution that allows you to condition multiple rooms or the entire house using just one system.

The indoor unit is usually located in the ceiling and the outdoor unit in a suitable location outside the home. Conditioned air is circulated via a network of ducts in your ceiling or floor cavity, with outlets in as many or as few rooms as you wish.

The temperature and hours of operation are controlled by a simple and easy to use control panel. All Fujitsu ducted air conditioners are reverse cycle, meaning they can keep you warm in winter and cool in summer.

Increase number of Outlets

High static ducted air conditioning allows for an increased number of air ducts to be installed.

Zone Control

Optional Zone Control allows for up to 8 zones to be connected, giving greater control to meet your individual needs.

Power SUPPLY

Use of single phase power allows for greater flexibility and minimises installation costs as there is no need to upgrade to a three phase power supply.
